

# Make the Switch to Energy Management and Save!

## Join United Electric Cooperative's Switch Team Energy Management Program:

- Receive special recognition at our Annual Member Meeting, with door prizes and a special prize drawing held only for Switch Team Members!
- Become an important part of a national effort to more effectively manage energy!
- Help your Cooperative save demand costs, which stabilizes rates!

### What is the Switch Team Energy Management Program?

To manage customer demand for electricity, a remote controlled switch is connected in your home to major electrical loads, such as a water heater, air conditioner and heat pump. During the coldest winter days and the hottest summer days, when your electric cooperative is nearing a peak demand, a signal is sent from our office to your home. That signal "instructs" your switch to operate and interrupt or shut-off the appliance which it is managing.

### Would I notice the interruption?

No, in most cases your appliances are managed for a short period of time which allows us to stabilize our demand costs with very little inconvenience to the individual homeowner.

By participating in our Switch Team Energy Management Program, you can make a difference in the future of your electric cooperative and in your electric rates for years to come. If you would like more information or have additional questions, please contact the energy management department at 1-800-748-1488. **To sign up, fill out the form below and mail to United Electric Cooperative, PO Box 319, Savannah MO 64485.**

Yes, I want to be a part of United Electric's Switch Team. Please contact me as soon as possible to install my Energy Management Switch. I have the electric appliances checked on the right. I understand that there will be no charge for the switch or installation.
